CalSAWS Imaging

## The new CalSAWS Imaging Solution is coming!
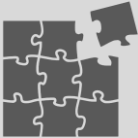

November 2021

Current

In-House
Multiple on-premise Imaging Solutions and processes across offices, including EDMS for DPSS and locally scanned and saved documents for DCFS

Multi-Step Access
Navigation via EDMS and multiple pages to access Imaging functionality for DPSS | No formal Imaging system for DCFS

Automation
Variance in Barcode Functionality requires manual indexing for many documents for DPSS | No automation for DCFS

Document-Driven Workflow
Auto-generated tasks with no override options may increase workload for DPSS staff | DCFS does not have the option to generate tasks from images
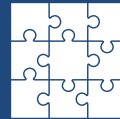

Future

Cloud-Hosted
A state-wide, centralized CalSAWS Imaging Solution hosted on the cloud for all 58 Counties

Streamlined Access
Direct access to Imaging Solution via CalSAWS with no desktop application needed

Augmented Automation
Optical Character Recognition (OCR) technology automatically reads and validates key values tied to a document, reducing manual work to index documents

Task-Driven Workflow
County-configured system assigns relevant tasks for staff | staff with appropriate security rights will be able to set a specialty flag to override task generation at the point-of-scan on a per image basis
