Project Risks and Issues

ID	Title	Details	Status	Impact	Severity	Date Logged
242	Central Print Insertion Barcode Placement & Margin Formatting Inconsistency	Recommended clearance for insertion bar codes is ¼ of white space around the bar code. The white space is designed to increase the accuracy of the bar code scan, reducing insertion errors or stoppages. The sample test file provided included pages with no clearance and on some forms, the bar code was overwritten by text or borders. Obtaining the recommended ¼ inch of white space would result in changes to the CalSAWS correspondence templates and would not be feasible prior to the planned go live for Los Angeles (August 2021) and C-IV (September 2021).
