

## **“Long Term Solution” options for the AAP/FC/KG Resource with multiple Direct Deposits**

### **Long Term Solution**

1. Update the direct deposit functionality for resources to be tracked at the program level (similar to C-IV)
  - a. Pros: Workers can set up separate direct deposit accounts by program.
  - b. Cons: Resources with multiple children on different programs will get multiple prenotes for the same direct deposit account. Each new case/program will need an additional prenote for the same account.
2. Enhance the existing direct deposit functionality on the RDB to be able to store multiple direct deposit accounts.
  - a. Pros: Less resource entries in the RDB and better management of direct deposit accounts.
  - b. Cons: This will be a fundamental change to how direct deposits are stored and managed in the System. This may also be a 500 to 1000 hour enhancement.
