22.11.29	29-Nov-22	Defect	CA-253025	Imaging		There was a request to ensure that the documents should be routed as soon as possible from the "Person Select Handling" (when the workflow agent picks up the document in under 10 minutes with no load) when no load was on the system. In addition, documents from 'Generate Task' and 'Mark Document' should be routed to archive in under 5 minutes when no load was on the system if not routing to 'Person Selection'.	The 'queue route timing' and logic has been corrected to ensure timely routing of documents.
