3.4.2 Root Cause Analysis (RCA)

- ▶ Root Cause Analysis (RCA) – 304 – Sacramento County Intermittent eCCP Access Issue – PRB0048528
 - On February 16, 2024, the Project team received incidents from Sacramento County as Users were experiencing eCCP access issue. During the investigation, the Contact Center team identified that after re-attempting login or refreshing the browser, Users were able to login to eCCP. The team continued investigating the root cause of the issue. Sacramento County escalated the issue to the Project team on Thursday, February 22, 2024, as the issue was impacting large number of Users. A bridge call was initiated with Sacramento County and the Contact Center team was engaged to troubleshoot the issue. A broadcast was sent to Sacramento County, including instructions to Users to clear the cache, restart the browser, and reattempt login to eCCP until the issue is resolved. The Contact Center team identified a few potential solutions and tested them on Friday, February 23, 2024, however, no significant improvement was observed. The Contact Center team engaged Amazon Web Services (AWS) to further investigate the issue and continued troubleshooting over the weekend. On Sunday, February 25, 2024, the Contact Center team identified that the lambda processing had exceeded a hard limit (unconfigurable) connection limit for handling open/idle connections with Application Processing Interface (API) calls and confirmed with Amazon Web Services (AWS) as the potential cause of the issue. Defect CA-274625 was created to track the fix for the issue and was targeted for implementation on Tuesday, February 27, 2024. The fix was implemented in a non-Production environment and successfully tested. Fix for the issue was deployed on February 27, 2024, evening, and the Project team confirmed the issue resolution with Sacramento County the next day. Sacramento County Users were no longer experiencing intermittent login issues.
- ▶ Root Cause Analysis (RCA) – 305 – CalSAWS Reporting Application Outage – PRB0048597
 - The CalSAWS reporting application, Qlik Sense, experienced an outage on March 4, 2024, from 3:55 p.m. to 2:03 AM March 5, 2024. Users accessing CalSAWS dashboards and On Request reports were affected and were unable to use the

Qlik Sense environment in Production. The analytics portion of batch which relies on Qlik services was also delayed by this outage and began at approximately 2:10 a.m. The Qlik sense test node was the target of initial attempts to restore the environment without affecting Production until a root cause and restoration method was confirmed. Initial attempts to restore the environment included restarting the affected repository services, restarting the EC2s, and reinstallation of the affected postgres repository to attempt to repair the services. None of the above steps restored the environment, so the decision was made to restore the affected node from the most recent known good state Elastic Block Store (EBS) backup while continuing to investigate and troubleshoot potential causes. The initial restoration of the test environment from backup failed when the EC2 was unable to properly identify with the domain. The Technical team and Amazon Web Services (AWS) support were able to resolve the domain join issue and restore the node successfully. Services were restored and the test environment was fully functional. The same procedure was followed for the Production repository node and passed initial smoke tests. The root cause of the issue was due to the installation of a C++ redistributable that is required as part of the installation of the System Center Configuration Manager (SCCM) client. This software was not identified as being required as part of the SCCM client installation. When the SCCM client installation initiated, it attempted to update the C++ redistributable to the minimum required version needed by the SCCM client. While the update was success per the logs, the installation appeared to have caused the postgres service to not startup.

- ▶ Root Cause Analysis (RCA) – 306 – Contact Center Administration Page issue – PRB0048640
 - On March 12, 2024, some Counties were experiencing an issue when performing roll-on or update on eCCP administration page. A troubleshooting call was initiated, and the Contact Center team identified that the issue occurred due to Defect CA-271545 that was delivered to Production on 24.03.07 to address an issue with the routing profiles not being alphabetized for the Counties. The Contact Center team confirmed that there was a data related issue that caused the page to not load properly for some Counties. Counties Impacted: Humboldt, Los Angeles, Orange, Placer, Sacramento, San Bernardino, San Luis Obispo, Shasta. Remaining 24 Contact Center Counties were not impacted by this issue. In the interim, Counties could request agent roll-on or updates from the CalSAWS Project by submitting a ServiceNow ticket (RITM). The Project team completed requested roll-on and updates by the end of each day on March 12, 2024. Defect CA-275293 was created to resolve the issue. The Contact Center team performed a rollback of the change (CA-271545) using CA-275293 and confirmed the issue resolution on March 12, 2024, at 9:00 p.m.
- ▶ Root Cause Analysis (RCA) – 308 – Kern County CalSAWS Access Issue – PRB0048712
 - On March 22, 2024, the Project team received incidents from Kern County Users at 3041 Bakersfield site as Users were unable to access CalSAWS and associated systems. The Contact Center Interactive Voice Response (CC-IVR) proxy was scheduled for decommissioning as it was only supposed to be used with Custom Call Control Panel (CCP). All Counties now use the Enhanced Call Control Panel (eCCP). A CalSAWS Information Transmittal (CIT) notification went out to all

Counties two weeks prior to the approved change, alerting the Counties of this decommission. After decommissioning, users at Kern County reported issues connecting to the internet. The change did not negatively impact other Counties. It was discovered that the CC-IVR proxy endpoint at Kern County had been taken and incorporated into browser configurations, being utilized in numerous flows beyond just the decommissioned Custom CCP. The Network team is working with the County to make sure those configurations are removed before attempting another decommission. Change CHG0046569 was rolled back to restore services. The original change will be rescheduled after coordination with the Counties.
