24.04.30	30-Apr-24	Defect	GAGR-607	Client Correspondence		There was a code change implemented on 4/25 that unintentionally changed the AWS user that is signing pre-signed URL hyperlinks that the county user used to download Address correction reports. This caused the URLs to expire in 12 hours instead of 7 days.	<p>The short term fix to be implemented on 4/30 is to revert the code change and then the application will go back to processing like it was previously and generating a report download URL with a 7 day expiration.</p> <p>The longer term solution is to fix the code so that it is using the correct user credentials which will go back to providing the expected 7 day expiration on the URLs. Once we have validated that the generated URLs are valid for 7 days, then we will re-promote the code change.</p>
