3.3.1 Release Schedule Production Defect Fix

- The Production Defect fix – Release Schedule reflects the number of defects planned in alignment to each monthly release (24.01, 24.02, etc.). The status of the defect in the fix and re-test pipeline is also reflected for each of the defect severity categories to establish the number of defects remaining to be fixed, re-tested, and closed for each of

the releases.

3.4.2 Root Cause Analysis (RCA)

- ▶ Root Cause Analysis (RCA) – 307 – Imaging Batch Processing Issue – Hyland Support Case #01723748
 - o The Imaging team identified a subset of documents (~20%) within the Batch Processing queue failing to process and opened a support case with Hyland (#01723748) to further investigate the issue. During the duration of this incident, the Imaging team performed manual processing of documents to prevent User impacts/backlogs. As the team proactively identified the issue before it impacted Users, there were no tickets and end User impact. A problem ticket was not created and a CalSAWS broadcast was not sent to the Counties as the issue was addressed before it even impacted Users. The issue resolution was identified through a joint effort from Hyland and the Imaging team that the "CI_ProcessCIAppDocs" script on one of the shared drives had the incorrect encoding saved on the script file. Correcting this allowed the script to run successfully and resolve the issue. Going forward, Hyland is working to incorporate alerting to look for and recognize script failures like this if they arise.
- ▶ Root Cause Analysis (RCA) – 308 – Kern County CalSAWS Access Issue – PRB0048712
 - o On March 22, 2024, the Project team received incidents from Kern County Users at 3041 Bakersfield site as Users were unable to access CalSAWS and associated systems. The Contact Center Interactive Voice Response (CC-IVR) proxy was scheduled for decommissioning as it was only supposed to be used with Custom Call Control Panel (CCP). All Counties now use the Enhanced Call Control Panel (eCCP). A CalSAWS Information Transmittal (CIT) notification went out to all Counties two weeks prior to the approved change, alerting the Counties of this decommission. After decommissioning, Users at Kern County reported issues connecting to the internet. The change did not negatively impact other Counties. It was discovered that the CC-IVR proxy endpoint at Kern County had been taken and incorporated into browser configurations, being utilized in numerous flows beyond just the decommissioned Custom CCP. The Network team is working with the County to make sure those configurations are removed before attempting another decommission. Change CHG0046569 was rolled back to restore services. The original change will be rescheduled after coordination with the Counties.
- ▶ Root Cause Analysis (RCA) – 309 – Production UEID Errors – PRB0048735
 - o On March 26, 2024, some Users in the CalSAWS Production environment encountered intermittent errors (UEIDs) while navigating through the CalSAWS application. The issue was tied to the CalSAWS Online application only. The intermittent UEID issue was encountered across all Counties. The issue was

CalSAWS – California Statewide Automated Welfare System

M&O Bi-Weekly Status Reporting Period: April 8, 2024 – April 21, 2024

Contractor Project Executive: Arnold Malvick

intermittent and impacted a subset of Users. As temporary alternate procedure, when the workers retried the same online transaction, it worked fine. The CalSAWS application performance was not impacted by the error. The issue was resolved by reverting a code change related to defect CA-267073. This action restored services and allowed Users to navigate the application without encountering intermittent UEID errors. A new defect CA-275760 was created to resolve the issue. The issue resulted from the implementation of defect CA-267073 as part of the 24.03 Release. The code fix for the defect inadvertently reused a cached OAuth client instead of using a new client instance for each user. This caused intermittent UEIDs when the application tried authorization against ForgeRock for CalSAWS session management. This issue was not detected in the lower environments as it was masked by the environment performance slowness that was experienced throughout the 24.03 release test cycle where timeout UEIDs were a common occurrence. In addition, in the lower environments, the intermittent UEID caused by defect CA-267073 occurred infrequently. It was also disguised in the fact that the UEID was not easily reproducible. For example, if the same actions/steps were taken after the UEID was encountered, the user was able to proceed forward without encountering the UEID anymore.
