2.3 Risks and Issues Summary

Project Risks

ID	Title	Details	Status	Risk Level	Severity	Date Logged
246	Perceived Gap in Functionality	<p>A perceived gap in functionality between GetCalFresh and BenefitsCal was identified. Select features identified within GetCalFresh are not present within BenefitsCal as they are not part of the project requirements, and change requests were logged to address. Impacts BenefitsCal adoption by Community Partners may be lower as they rely on features (like the referral code) to complete their work. The future migration from GCF to BenefitsCal in 2022 is at risk until features are added to BenefitsCal.</p> <p>Status Updates:</p>	Open	Low	Medium	05/10/21

4.2 Technology Operations

The BenefitsCal technology operations team provides Amazon Web Services (AWS) serverless infrastructure and BenefitsCal application support. All upgrades and changes to the infrastructure and application are performed in accordance with the Consortium change control process. AWS serverless infrastructure support activities include upgrades to AWS components such as the Web Application Firewall (WAF), CloudFront, Application Programming Interface (API) Gateway, Lambdas, Simple Queue Service (SQS), CloudWatch, X-Ray and Aurora Postgres, Postgres Relational Database Service (RDS), and RDS Proxy. Application maintenance and support includes release and configuration management across the non-production and production environments. The Redis Cluster mem cache is upgraded to 6.2.6.H.

Customer Experience (CX) Measurements Data

- Monitored the CX Measurements data from Medallia, Amplitude, and BenefitsCal on a day-to-day basis to identify and address potential usability issues.
- Analyzed Always on survey data for August.

CalSAWS – BenefitsCal (Portal/Mobile) Bi-Weekly M&O Report

Period: September 9, 2024 to September 22, 2024

User Engagement

- Conducted customer generative research sessions for “Take it to the lab” items [CSPM-71947].
- Recruited customers for MC renewal tracker [CSPM-74232].
- Conducted usability testing sessions for ABAWD designs [CSPM-67652].

Enhancements

- Conducted usability testing sessions for ABAWD designs [CSPM-67652].
- Finalized designs for Update styling of selected answers in Chatbot [CSPM-74599].
- Continue design on GCF Parity items (#22, #44)
- Conducted generative research sessions for “Take it to the lab” items [CSPM-71947].
- Conducted generative research session for Medi-Cal Renewal Tracker [CSPM-74232].

Advocate Engagement

- Facilitated September UCD monthly meeting with Advocates.
- Returned comment log from the August UCD monthly meeting.
- Sent comment log for September UCD monthly meeting.

5.2.4 Activities for the Next Reporting Period – UCD

5.6.2 Automated Regression Test (ART) Coverage

The following are the automated regression scripts executed for regression in BenefitsCal for Release 24.08.29.

Release	# of Scenarios Executed	# of Scenarios Passed	# of Scenarios Failed	Overall Pass%	Pass of Executed	Coverage
24.09.26	56	56	0	100	100	CalFresh (CF), CalWORKs, Medi-Cal (MC), General Assistance or General Relief (GA/GR), and Disaster CalFresh programs with the Apply for Benefits, Report Change, Renewal, and Recertification for the MC, CF, GA/GR, and SAR 7 flows, IRT (Income Reporting Threshold), TWM along with Appointments, Administrative, ROI and SSA not enabled, E-Signature, Global Search, static validations, EBT2259 and CF303 are covered by automated regression. We will also validate following flows with data in every field – AFB with all programs, CF37, DCF, MC 210, Redet CWF, MC 216, MC 217, CF Only AFB, GA/GR, Redet CW, CW Only AFB, MC Only AFB, RAC, SAR 7

Table 5.6-1 – Automated Regression Scripts Executed in BenefitsCal

Note: Automated regression tests are run for each planned release. Automated regression tests are excluded for emergency releases as the window for execution is short. The regression suite is revisited after each major release and periodically updated once new application functionality has been released. The update could be adding a new script to the repository or modifying an existing script to cover new functionality since the new functionality replaces the old functionality. New functionality will be called out in the coverage column.

6.0 Performance Test

6.1 Highlights of the Reporting Period – Performance Test

Release 24.09.26 – September Monthly Release

- The BenefitsCal team successfully executed two (2) rounds of performance tests for the September monthly release with one (1) defect and two (2) enhancements in scope. The team rescripted the scenarios with the release implementation and validated the scripts on the latest build/codebase. After the first test execution, the team observed a notable decrease in the overall hits and transactions per second while no impact to the average response time or application performance. This also resulted in the lower achievement of the business metrics across all scenarios as compared to previous baseline result. Upon further analysis, the team identified the potential root cause as the JavaScript code written in the scripts and before each action to encrypt one of the header values as per the new SHA 256 algorithm implementation. This could have caused the increase in the think time within the actions of each script, reducing the iterations achieved for each scenario. The team will execute another small-scale test (a few scripts) to observe the before and after transaction count to confirm the root cause analysis (RCA). The team executed the second test, and the results were consistent in the average response time and errors with the first test and previous baseline. The detailed JMeter reports, and the results comparison spreadsheet are uploaded to the CalSAWS SharePoint.
