### 4.7.1 Automated Regression Test (ART) Coverage

The following are the automated regression scripts executed for regression in BenefitsCal for Release 25.09.25.

Table 18: Automated Regression Scripts Executed in BenefitsCal

RELEASE	# OF SCENARIOS EXECUTED	# OF SCENARIOS PASSED	# OF SCENARIOS FAILED	OVERALL PASS %	PASS OF EXECUTED	COVERAGE
25.09.25	57	57	0	100	100	CalFresh (CF), CalWORKs, Medi-Cal (MC), General Assistance or General Relief (GA/GR), and Disaster

RELEASE	# OF SCENARIOS EXECUTED	# OF SCENARIOS PASSED	# OF SCENARIOS FAILED	OVERALL PASS %	PASS OF EXECUTED	COVERAGE
						CalFresh programs with the Apply for Benefits, Report Change, Renewal, and Recertification for the MC, CF, GA/GR, and SAR 7 flows, IRT (Income Reporting Threshold), TWM along with Appointments, Administrative, Time Clock, ROI and SSA not enabled, E-Signature, Global Search, static validations, EBT2259 and CF303 are covered by automated regression. We will also validate the following flows with data in every field – AFB with all programs, CF37, DCF, MC 210, Redet CWF, MC 216, MC 217, CF Only AFB, GA/GR, Redet CW, CW Only AFB, MC Only AFB, RAC, SAR 7, Bulk Doc Upload

**Note:** Automated regression tests are run for each planned release. Automated regression tests are excluded for emergency releases as the window for execution is short. The regression suite is revisited after each major release and periodically updated once new application functionality has been released. The update could be adding a new script to the repository or modifying an existing script to cover new functionality since the new functionality replaces the old functionality. New functionality will be called out in the coverage column.

## 5 PERFORMANCE TEST

### 5.1 Performance Test

#### ▪ Release 25.09.25 – September Monthly Release

- The BenefitsCal September performance team executed two (2) rounds of Performance tests with the scope inclusive six (6) enhancements and fourteen (14) defects as *CSPM-78574: 2025 Updates to the Single Streamlined Application (SSApp)*, *CSPM-81305: Technical: Update Form Status API to Accept Individual Name in String Format*, *CSPM-79876: Phase IV: BenefitsCal Database Request-Response Payload Table Optimization*, *CSPM-50485: Update API to send CBO Manager/Assister Name for submitted applications for a new reporting requirement in CalSAWS*, *CSPM-79311: Consolidate Document Upload Functionality Across the BenefitsCal System*, *CSPM-74269: Collaboration Model – Q1-2024: CBO Account Creation*, *CSPM-80728*, *CSPM-80729*, *CSPM-80730*, *CSPM-80731*, *CSPM-8073*, *CSPM-80751*, *CSPM-80807*, *CSPM-81000*, *CSPM-81171*, *CSPM-81286*, *CSPM-81299*, *CSPM-81305*, *CSPM-81319* and *CSPM-81320* respectively. The performance testing team updated the impacted scripts on the latest codebase to reflect the enhancements and defect changes and ensured all other scripts work as expected.

The performance team executed the 1st test as per the below plan and observed errors code "504" in document/getDocumentsHistoryByUserId for CBO users and DB CPU utilization reaching 90%. As the CBO scenarios has limited virtual users and iterations, the errors were very limited, however, the timeouts causing high DB CPU utilization caught teams attention and the test was stopped/ended ten (10) minutes into ramp up, with overall the test duration as 1 hour and five (5) minutes compared to the typical one (1) hour fifty-five (55) minutes duration. The team further analyzed the database query performance issues and identified the root cause as applying an additional where clause and primary and foreign key joins in SQL subquery. The team further made the query optimization and tuning and the performance team executed the second test as planned, observing no 504 errors or high database CPU utilization and the overall tests results were comparable to baseline in terms of errors and average response time. Also, the query in question was executed within the expected response time.

The Team shared the findings outlined in the previous paragraph with the Consortium team on 09/22/25 and received approval to execute a third round of performance testing as per the plan outlined below to confirm the query tuning and attain two (2) consistent performance test results for the September monthly release.
