26.07	26.09.10	SCR	CA-294128	Infra Contact Center	N/A	Logan Pratt	Currently, Counties can set the maximum number of callers that can wait in a Call Queue, however, reporting metrics do not make note of which queue reached capacity or how many callers were turned away because a specific queue was at capacity. Amazon Connect can provide an overall number of calls across the collective queues which reached capacity and were asked to call back another time.	Now, fields will be created in Amazon Quick for when calls are diverted due to the queue reaching maximum capacity. The fields are: 1) Max Capacity Queue - Queue in which call was attempting to enter 2)Max Capacity Timestamp - Date and time in which contact was unable to enter queue due to max capacity Both fields will be added to Dialed Number Summary and Contact Routing Summary data sets.
